No Reason To Be Afraid of  
Injections Anymore!  
A shot you will love!

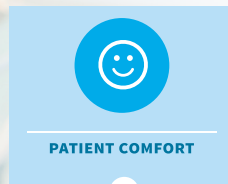

## WELCOMING ANUTRA TO OUR PRACTICE!

One of our main goals is for our patients to have a wonderful dental experience. We are pleased to announce that our practice has started using Anutra, a buffered anesthetic, to better our patient's experience and increase our office's efficiency.

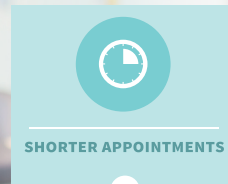

By using Anutra, our patients are feeling less of the "burning" sensation that typically is felt with unbuffered anesthetic. Also, patients are getting numb much faster allowing appointment times to run as properly scheduled. We are excited to be using this anesthetic delivery system in our office.

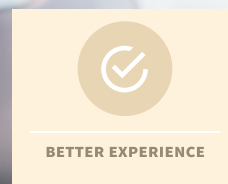

Anutra Local Anesthetic Delivery System

PATIENT COMFORT

SHORTER APPOINTMENTS

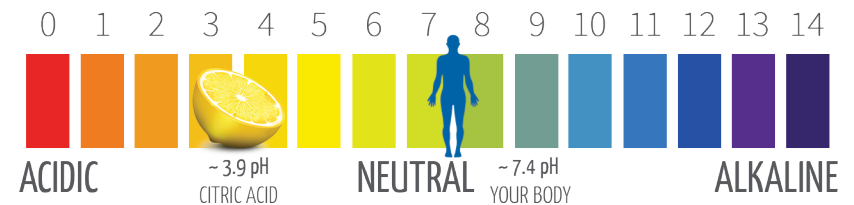

BETTER EXPERIENCE

## BENEFITS OF USING ANUTRA.

If you have ever received a shot, you probably felt a burning or stinging sensation. That pain is typically due to the high levels of acid found in the local anesthetics doctors use to help get patients numb for procedures. To put it in perspective, the typical local anesthetic, such as Lidocaine with Epinephrine, contains as much acid as citric acid. Can you imagine getting a shot with something as acidic as lemon juice? We have made getting a shot way less scary by utilizing the science of buffering.

The Anutra Local Anesthetic Delivery System precisely mixes anesthetic with a neutral agent to help lower the acidity level closer to the natural pH level of the body. By doing this, the numbing agent enters your body more quickly and numbs almost immediately. This means there is hardly pain from the needle and there is no more burning sensation.

**AVERAGE 1.81**

On a pain scale of 1-10, 1 being no pain and 10 being extreme pain

**92%**

of patients reached **pulpal anesthesia in 2 minutes**

**64%**

of appointments were at least **15 minutes shorter** than scheduled.

**16.7 MINUTES**

Average **time saved** per appointment. (Average practice saves 2 hours a day)
